Mr. Gerrit Oosterkamp, Modesto, is proud of his young almond orchard — consisting mostly of Nonpareil and Merced varieties. Photo was taken in September, 1962 — just 20 months after planting in the orchard. Good soil and intensive care pay off.

GREETINGS

To Our Friends and Customers!

As we begin our 21st season we first want to thank you for the confidence and support you have given us over the years.

The tremendous scientific and technological advances made during the past twenty years in so many fields of endeavor have changed our lives in many ways. In our own field, while not always spectacular, progress is constantly being made which enables the nurseryman to produce better trees and vines.

Twenty years ago little was known about the common plant virus diseases that often infect fruit trees. Today, working in cooperation with our State Department of Agriculture, our budwood sources are indexed to enable us to spot and avoid infected trees.

Soil fumigation, hardly known twenty years ago, has now passed the experimental stage — having been proven an effective means of nematode control in nurseries.

A number of resistant rootstocks are now available. At the present time the farmer planting peaches, almonds or grapevines, can, by using the proper rootstock, be assured of rootknot nematode resistance throughout the life of his planting.

We firmly believe that any business to survive and grow must always be willing to change with changing times — to take advantage of scientific research, and to constantly strive to improve its product.

Trees produced by the latest improved methods — with exacting care from the planting of the seed through every nursery operation to the final grading and inspection, are the kind that will give you "Satisfaction in nursery stock".

HOW TO FIND US

NEW OFFERINGS THIS SEASON

THE EVERTS CLING. (Not patented) Introduced by the Univ. of California, the Everts is superior in flavor to any of the canning clings now being grown. Ripening with Halford, it sizes well and is a good producer. We are especially interested in this peach because superior flavor, more than anything else will increase the consumer demand for canned peaches. The Everts deserves wide trial, and if you plant clings this year we suggest you include a few rows for comparison.

THE RIPON ALMOND. (Pat. Pending) A Fred Anderson introduction. Mr. Anderson believes that the almond of the future must bloom late; must have a well sealed shell to lessen worm damage; and must have a small kernel to meet demand of the candy manufacturers. The Ripon meets all these requirements, and in addition, the variety so far has been a very heavy bearer. We are much impressed with the Ripon, and predict that it will prove to be an outstanding variety. We recommend it for trial to all almond growers.

EARLY BURLAT & MOREAU CHERRIES

(Not patented). Cherry growers have long been searching for really good early cherries. These two varieties were introduced by the U.S. Dept. of Agriculture after careful testing. They both ripen before Tartarian. Their fruit is large and handsome. They ship well to eastern markets, where they have been bringing most attractive prices.

START RIGHT

Our Field Men Will Help You

If you live anyplace in the San Joaquin Valley, contact us. We will inspect your land and advise you about ground preparation, varieties, root-stocks, etc. Costly mistakes can often be prevented. No charge or obligation for this service.

Our trucks run from Bakersfield on the south to Red Bluff on the north, and we deliver throughout this area.

CERTIFIED CHERRIES

We grow and recommend CERTIFIED CHERRY TREES. These are certified by our State Department of Agriculture. All budwood is taken from sources that index negative for viruses. The trees must pass a number of inspections by plant pathologists at stated intervals during the entire time they are growing in the nursery. There is considerable more expense in producing them, but men who know cherries plant them because they have found that these trees reduce the risks of viruses and Crinkle Leaf to the lowest possible degree. For certified stock, add 25c per tree to cherry prices on opposite page.

TERMS OF SALE

DELIVERY. Our trucks run throughout the San Joaquin and Sacramento Valleys. Truck deliveries are made without charge in this area. If necessary to ship your order by rail or motor express, we ship collect, and make no charge for packing. Growers are more than welcome to call and take delivery of their orders at our salesyard. Our shipping and delivery season runs from December until the last of March.

QUALITY and CONDITION. If any defective trees or vines are found which may have escaped our graders; or if any stock arrives in defective condition, we must be notified within ten days. We will then replace, or refund the purchase price of such defective trees or vines.

TERMS and PRICES. Prices quoted are net cash. All prices are subject to change without notice. Interest at 7% on past due accounts. Nursery stock is subject to 4% State Sales Tax.

INSPECTION. California State Law provides that all nursery stock must be inspected by County Agricultural Commissioner at county of destination immediately upon receipt thereof.

LIABILITY. We use every care in the selection of budwood and the growing of nursery stock in order to have it true to name. We will replace, or refund the purchase price for any stock which may prove untrue. Our liability for this, however, or any other cause whatever, is limited to a sum no greater than the original purchase price.
